

Warm-Ups & Class Notes - Systems by Substitution

WARM-UPS - Solve each system by graphing.

1) $y = -\frac{1}{2}x + 4$

$y = x - 2$

2) $x + 3y = -9$
 $2x + y = 2$

WARM-UPS - SOME SPECIAL CASES: Solve each system by graphing.

3) $y = \frac{5}{3}x - 1$

$y = \frac{5}{3}x + 3$

4) $y = -\frac{1}{2}x + 3$
 $x + 2y = 6$

CLASS EXAMPLES: Solve each system by substitution.

5) $y = 4x$
 $y = x + 3$

6) $y = -7x + 22$
 $y = -3x + 6$

7) $y = x + 6$
 $-6x - 4y = -14$

8) $y = -5x - 16$
 $10x + 2y = -32$

Set up a system of equations that would help to solve the problem. (Students do not have to solve the system at this time.)

- 9) Joe's school is selling tickets to a fall musical. On the first day of ticket sales the school sold 7 adult tickets and 6 student tickets for a total of \$129. The school took in \$222 on the second day by selling 10 adult tickets and 12 student tickets. Find the price of an adult ticket and the price of a student ticket.
