

Systems of Equations & Inequalities by Graphing Date _____ Period _____

Today, the temperature in New York is -1° and is expected to rise by 3° per day. It is 6° in Alaska and expected to fall 1° every 2 days.

- 1) Write an equation to determine New York's temperature y in the next x days.
- 2) Write an equation to determine Alaska's temperature y in the next x days.
- 3) Label each axis and graph both equations on the axes below.

- 4) Where do the lines cross? What does this represent in this situation?

You and your friends want to go to a skate park on Saturday. There are two parks in your neighborhood, Puffin Park and Dragon Park. The parks both charge for skating at their park as follows:

Puffin Skate Park : \$3.00 to get into the park and \$1.00 for every hour.

Dragon Skate Park: \$5.00 to get into the park and \$0.50 for every hour.

- 5) Write an equation to represent the total cost, y , after x hours for each of the parks.

Puffin Equation:

Dragon Equation:

- 6) Label each axis and graph both equations on the axes below.

- 7) Which Skate Park would you choose, and why?

Solve each system by graphing.

$$8) \ y = \frac{1}{2}x - 3$$
$$y = \frac{5}{2}x + 1$$

$$9) \ y = \frac{3}{2}x - 4$$
$$x = 2$$

$$10) \ y = -x + 2$$
$$y = x + 4$$

$$11) \ y = \frac{7}{3}x - 4$$
$$y = \frac{1}{3}x + 2$$

$$12) \ y = \frac{2}{3}x - 1$$

$$2x - 3y = 3$$

$$13) \ 2x - y = -2$$

$$y = 4$$

$$14) \ 2x - 3y = 3$$

$$2x - 3y = -3$$

$$15) \ 3x - 4y = -16$$

$$x + 2y = -2$$

Sketch the solution to each system of inequalities.

16) $y \geq -\frac{5}{3}x + 3$

$y > \frac{1}{3}x - 3$

17) $y \geq \frac{1}{3}x + 2$

$y < -\frac{2}{3}x - 1$

18) $2x + 3y \leq -3$
 $2x - 3y > -9$

19) $x - y \geq -3$
 $x \leq -1$
